

# **when it comes to skating rinks, we've got you covered**

Linear Rubber's Rink Mats and Runners offer protection for virtually every type of existing flooring and are perfect for use in new installations as well.

They absorb the shock and impact from skates in all traffic areas, including locker rooms, bench areas, concession stands, entryways, penalty boxes, and access areas to the skating surface.

Rink Mats resist cuts from exposed blades: Rink Runners are recommended for use in areas with protected blades. Made from non-porous natural rubber, these products will not absorb moisture, such as melted ice, spilled drinks, etc. They are easily maintained with soap and water, and will not crack or peel even under the most extreme temperatures.

For use with  
exposed blades!

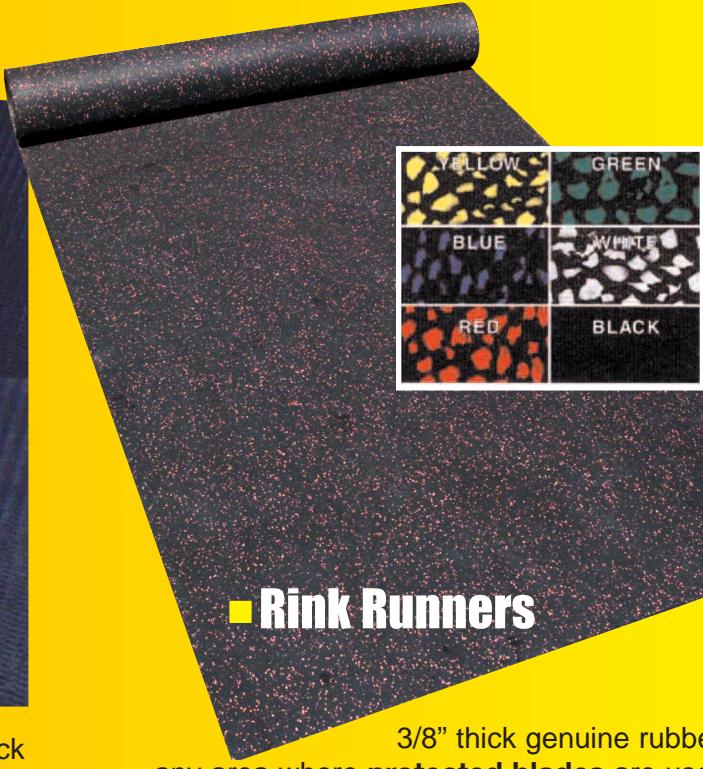

## ■ Deluxe Rink Mats

**Resistant to exposed blades**, these heavy-duty 5/8" thick nylon-reinforced rubber runners are ideal for the most demanding areas around the skating rink. The mats are the largest in the industry, and are available in lengths up to 16' and widths to 6'. They lay flat and resist curling when installed over any level surface. The mats have a diamond pattern surface for additional traction. Deluxe Rink Mats are also offered with optional interlocking tabs for larger installations.

## ■ Econo Rink Mats

For use with  
exposed blades!

## ■ Rink Runners

3/8" thick genuine rubber for any area where **protected blades** are used, Rink Runners come in rolls, 4' wide and in lengths up to 250'. They can be custom-cut to your exact specifications. Recommended for installation with an adhesive and sealant, they are available in solid black, or black with yellow, white, green, or blue flecks. Custom specialty colors are also available.

LRP

73" x 49" budget mats are 1/2" thick genuine rubber with true-square edges to align perfectly without unsightly seams or gaps. For installations in areas where **blades are exposed**, Econo Rink Mats have a diamond-pattern top to provide excellent traction.

\* Thicknesses may vary slightly due to rubber flow when curing.
